

87th GASG Meeting Fuelling the World: Hydrogen Sensing

Thursday, 21st March 2024
Cranfield University and Online

The 87th GASG Meeting was held at Cranfield University and attracted one of the largest audiences in the 30-year history of the group. 8 renowned speakers provided detailed insights into cutting edge research addressing the significant challenges in the detection and measurement of hydrogen, as well as explaining key issues in the understanding the role of hydrogen as an indirect greenhouse gas.

Prof Dame Helen Atkinson DBE FREng explained the world-class facilities at Cranfield enabling research into a wide range of aspects of critical importance to the development of the Hydrogen economy. Delegates were then able to see some of these during tours kindly provided by members of the research teams.

The day was an undoubted success and demonstrated once again the unique ability of GASG to bring people together from all parts of the industry to learn about developments in a productive forum which facilitates engagement and discussion.

GASG Members can review the meeting materials by logging on to the restricted area of the website. A full report of the day will be published in Newsletter 79, which will also be available to Members.
